NLC is launching the NLC Green Health Challenge!

Healthcare generates millions of tonnes of waste annually and has a higher CO₂ footprint than aviation. As an impact-driven B-corp-certified venture builder, we want to do our part. Therefore, NLC is launching the Green Health Challenge to build 10 sustainability startups before year-end.

Are researchers from your university working on a technology that could reduce emissions in healthcare? Or is your hospital staff working on a waste recycling idea in their hospital? With our Green Health Challenge, NLC will support anyone with a sustainability idea or invention and together, we will build a startup that will make healthcare more sustainable.

Applications are open until the 15th of September 2022. At the end of 2022, the 10 winning ideas will follow our Kickstarter program to be built into ventures. These ventures will receive NLC's support in teaming, 100.000 euros of funding, and network and legal/tech/business support.
